Privacute

Capability statement

MARYLAND CYBERSECURITY FIRM · GRC · DATA PRIVACY · AI ACCESS GOVERNANCE

OVERVIEW

Compliance that holds up when it counts.

Privacute is a Maryland cybersecurity firm for teams that can't afford a paper-only program. We specialize in governance, risk and compliance (GRC) and data privacy, and we map every control to the rules your industry answers to. Programs, assessments, audit evidence, and training that turns policy into habit.

CORE COMPETENCIES

Cybersecurity GRC
Governance, risk and compliance programs mapped to the frameworks and regulations your industry answers to.

Data privacy
Privacy program support, including alignment with HIPAA security requirements for healthcare.

AI & non-human identity governance
Least-privilege, expiring access for AI agents and service accounts, with an audit record for every request and alerts on denials. Evidence supports NIST SP 800-53 access control (AC) and audit (AU) controls.

Training for your people
Teaching the teams who work alongside AI and sensitive data to do it safely.

INDUSTRIES

Healthcare (alignment with HIPAA security requirements) · Financial services · SaaS · Other regulated and data-heavy industries.

WHAT SETS US APART

Programs and people together. Governance, privacy and training delivered as one engagement, so policy becomes practice.

Ready for AI. AI agents and non-human identities treated as first-class risks, with deny-and-alert on out-of-scope or expired access.

Your data stays yours. Access and audit data stay in your environment.

COMPANY DATA
